Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Graphics These notes contain the substance of lectures on the subject of graphics which have been given to the students in Mechanical, Electrical and Chemical Engineering at the University of Pennsylvania for a number of years past. They are intended to cover only fundamental principles, and those familiar with the subject will recognize that the methods of treatment used by many writers have been utilized in their preparation. Many of the short cuts in common use are not referred to in the text, as the time allotted to this work is limited, and while such short cuts are of special value in special work, they are readily grasped by one who has a good fundamental knowledge of the entire subject. The treatment of trusses is short, but is believed to be full enough to enable beginners to grasp the general principles. The graphics of machines is limited to such examples as will most clearly set forth the effect of friction on the line of action of the forces to be determined. The latter portion of the book is devoted to forces not in the same plane, such as occur in many pieces of machinery. It is intended that the book shall be used as a reference book, many numerical problems being worked out on the drawing board. The writer is indebted to practically every author on the subject for methods or suggestions, and has simply made a continuous story of the subject matter. University of Pennsylvania, June 1, 1908. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical...
