Springer Science+Business Media, United States, 1995. Hardback. Book Condition: New. 1995 ed.. 254 x 178 mm. Language: English . Brand New Book ***** Print on Demand *****.The reader will find in this volume the Proceedings of the NATO Advanced Study Institute held in Cortina d Ampezzo, Italy, between July 25 and August 6, 1993, under the title From Newton to Chaos: Modern Techniques for Understanding and Coping With Chaos in N-Body Dynamical Systems. This institute was the latest in a series of meetings held every three years from 1972 to 1990 in dynamical astronomy, theoretical mechanics and celestial mechanics. The proceedings from these institutes have been well-received in the international community of research workers in these disciplines. The present institute was well attended with 15 series of lectures being given by invited speakers: in addition some 40 presentations were made by the other participants. The majority of these contributions are included in these proceedings. The all-pervading influence of chaos in dynamical systems (of even a few variables) has now been universally recognised by researchers, a recognition forced on us by our ability, using powerful computer hardware and software, to tackle dynamical problems that until twenty-five years ago were intractable. Doubtless it was felt by many that these new techniques provided a break-through in celestial mechanics and its related disciplines. And so they were.
